# Homepage

- Motto / Hook
- Explore essays → allow people to browse without signing in (preview to be locked behind login)
- Upload my essay
  ↓
  uploader → sign up page

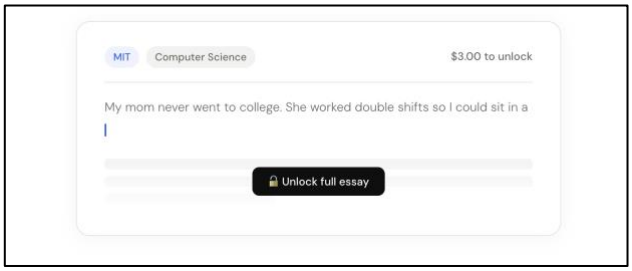

Reference:

- Logos of universities in our database

  Make each logo clickable and when clicked an essay opens in an interactive element with typewriter animation of the essay (short preview) + button to unlock → takes you to sign up

  Above this: there should be a menu of 5-7 uni logos, upon clicking one of this, an essay should start typing and the unlock full essay button should lead them to the preview page of that essay but preview will be locked and it should ask the user to sign in

# For writers signing up:

When they click ‘upload my essay’, open a sign up page for writers to sign up with email/google and then prompt them to completing:

- Writer profile
- Uni selection → multiple tick boxes for accepted unis
- Open application for each uni with progress bar
  (for each uni how much of application is complete)

This and writer profile is to be reflected on writer dashboard

# Changes (Developer Implementation Spec)

## 1. Overall UI/UX Updates

- Refine layout spacing, typography hierarchy, and component consistency across homepage and dashboards
- Ensure clear CTA hierarchy:
  - Primary: Explore essays / Upload essay
  - Secondary: Sign up / Unlock preview
- Improve visual feedback on hover states, loading states, and button interactions

## 2. Payouts System Implementation

- Implement backend logic to track purchases per essay
- Store earnings per writer in dashboard and connect stripe to payout as much is available in the dashboard with a $10 minimum for redemption.
- Add payouts dashboard module showing:
  - Total earnings
  - Pending payouts (reset to 0 once payout is maid )
- Integrate payout provider (Stripe Connect)
- Add payout status states (pending / processing / paid)

## 3. Writer Analytics Wiring

ONLY include meaningful analytics — avoid unnecessary metrics.

Track and display:

- Essay views
- Preview opens
- Purchases per essay
- Total revenue

Do NOT include vanity metrics like time on page unless already trivial to implement.

# 4. Purchase Flow Behavior

When an essay is purchased:

- Buyer (student) should appear on writer dashboard under a “Customers” or “Buyers” section
- Share writer contact email with the student after purchase confirmation
- Trigger:
    - Confirmation email to student
    - Notification to writer

# 5. Dashboard Simplification

- Remove unnecessary analytics or clutter
- Focus dashboard on:
    - Essays
    - Buyers
    - Revenue
    - Application progress

# 6. Search Improvements

- Keep current search logic

But wire search results to:

- University logos / images
- Essay preview cards

Each result should display:

- Uni logo
- Essay title
- Writer
- Preview snippet

# 7. University Logo Interaction

- Make all university logos clickable on homepage

- On click:
    - Open essay preview modal/page
    - Show typewriter animation preview
    - Show locked content overlay
    - CTA: Unlock → Sign up

## 8. Application Progress Tracking

For each university selected by writer during sign up (where they can select all universities they got into) track if they have begun applications for each of those and show that on dashboard:

- Store progress percentage
- Display progress bar per uni
- Reflect progress on writer dashboard
